

EASTSIDE
SCIENCE
CAFÉ

At the next Eastside Science Café:

Personal Genome Sequencing

Jared Roach, M.D., Ph.D.
Institute for Systems Biology

Monday, February 11, 7:00 p.m.

The first personal genomes were sequenced only five years ago and cost millions of dollars. Personal genome sequencing is now a thousand times cheaper, and many people are considering sequencing their own genomes to help answer a variety of questions, covering topics ranging from their ancestry to their health. Join the Institute for Systems Biology's Jared Roach, M.D., Ph.D., to explore some of the new knowledge about the genome.

The Eastside Science Café is your opportunity to talk with researchers about science and technology research—all in the comfortable atmosphere of a local pub.

Science Cafés are **free**, open to **all ages** and no science background is required!

7 p.m. on Second Mondays
Wilde Rover Irish pub
111 Central Way, Kirkland

For More Information
